

## Environmental Policy

CoGen owns, develops and manages the construction and operation of energy recovery projects utilising technically advanced solutions to process waste feedstocks otherwise destined for landfill.

The company will comply with the spirit as well as the letter of the environmental legislation, co-operating fully and maintaining an open relationship with all regulatory authorities. We will ensure that protection of the environment is firmly embedded in our company's culture, activities and responsibilities.

Where environmental aspects are deemed significant, a programme of objectives and targets has been set and will be reviewed to aid continuous improvement.

We will monitor and continually improve our environmental performance and practices through the environmental management system to:

- Comply with, or exceed, the requirements of current environmental legislation and codes of practice.
- Take all essential measures to prevent pollution.
- Ensure proper management of our environmental aspects and their impacts to minimise the environmental impact of our activities.
- Minimise energy and water usage in our buildings, vehicles and processes in order to conserve supplies, and minimise our consumption of natural resources.
- Apply the principles of continuous improvement in respect of air, water, noise and vibration pollution from our facilities and reduce any impacts from our operations on the environment and local community.
- Assess – in advance - the environmental impact and life cycle of any new processes or products we intend to introduce.
- Educate, train and motivate employees to work in an environmentally responsible manner.

This policy will be communicated to all employees, contractors and suppliers and will be available to the public if requested.
